

Andrew Cumine - Senior Engineering Manager

ajcumine@gmail.com | +44 7789 172199

Engineering Manager with 10+ years of experience across product engineering and people management. Skilled at building and scaling cross-functional teams, defining engineering processes, and delivering software products in fast-moving startup and consulting environments. Strong technical foundation in TypeScript, React Native, and frontend systems.

Skills

- **Languages & Frameworks:** TypeScript, React, React Native, Redux, Node.js, Elm
- **Cloud & Infrastructure:** AWS, GCP, Docker, Kubernetes, Terraform
- **Databases:** MongoDB, PostgreSQL, Redis
- **Practices:** Agile, Kanban, Scrum, OKRs, Microservices, Monorepo, Data-driven development
- **Tooling:** CircleCI, Buildkite, Sentry, App Center, Papertrail

Work Experience

Second Nature

Senior Engineering Manager, April 2023 - present | **Engineering Manager**, March 2021 - April 2023

React Native iOS and Android application focussing on behavioural change, education, and medication to aid weight loss. Supporting customer facing web application, internal operations applications, and supporting platforms.

- Typescript, React, Redux, React Native, MongoDB, socket.io, Papertrail, Sentry, App Center

People Management

- Managing up to 7 engineers across 2 cross-functional teams, including hiring, performance reviews, salary calibration, promotions, and structured learning plans
- First engineering manager hired at the company; sole EM for 3 years, establishing the management function and shaping engineering culture
- Partnered with the VP of Engineering to define roles, design the hiring process, and run interviews. Directly hired 4 current engineers and an engineering manager
- Managed underperformance through to exit, owning the full process including difficult conversations, improvement plans, and documentation

Process & Delivery

- Inherited an engineering team with no formal processes and introduced structured ways of working across the organisation
- Introduced a bug triage and prioritisation process that led to a 50% reduction in customer support calls related to bugs over a 3 month period
- Established the company's first automated testing strategy, moving from solely manual QA to structured automated testing, reducing regressions and improving release confidence. Designed and built a test user generation system for the UAT environment, replacing the previous practice of copying production data to test specific user types
- Partnered with product managers to design and deliver a comprehensive validation plan for new features including regression testing, in the absence of any dedicated QA resource
- Designed and implemented a product validation and release process for iOS and Android, used across the engineering team
- Moved the team from ad-hoc Trello usage to a structured Kanban workflow in Shortcut, giving visibility of work status across teams
- Redesigned the code review process to focus on functional correctness and business logic rather than stylistic nitpicks
- Lead weekly engineering meetings for knowledge sharing, alignment on standards, and cross-team issue resolution
- Reduced CI workflow time from 15 minutes to under 10 minutes

Technical Leadership

- Designed and built a pharmacy-approved prescription medication service for GLP-1 weight loss drugs (Wegovy, Mounjaro), navigating significant regulatory requirements around medical data and prescriptions. This is now a major revenue stream and cornerstone of the business
- Key driver of the migration to a microservices architecture within a monorepo, reducing code duplication and divergence across projects
- Work closely with product managers to shape roadmaps, balancing product delivery with technical investment and helping prioritise engineering improvements within product workstreams
- Hands-on technically, contributing code alongside management responsibilities

Startup Core Strengths, September 2021.

A growth course for startups focussing on delivering customer value via metric driven processes of rapid experimentation.

Career break, March 2020 - March 2021.

Took time during the COVID-19 pandemic to reset after six years of consulting and evaluate the next step in my career.

[Red Badger Consulting Ltd](#), June 2014 - March 2020.

PagoFx - Operations, July 2019 - March 2020.

- Typescript, React, Redux, PubSub, Docker, PostgreSQL, Kubernetes, Terraform, Buildkite, Google Cloud Platform, GitHub, Jira, Confluence, Monorepo.

Online, iOS, and Android international payments platform PagoFx by Santander. Operations team were responsible for the payment processing, foreign exchange, financial safeguarding, and accounting microservices. Use of PubSub messaging systems enabled high levels of reliability and excellent error tracking across the platform.

Highlights include:

- payments and foreign exchange PubSub executors allowing for detailed tracking of all payments and financial account transactions
- recorded double entry accounting system for all financial transfers
- comprehensive error reporting throughout payment and operations platforms

ASOS - My Account, April 2017 - September 2017.

- Node, JavaScript, React, Redux, Webpack, Babel, PactJS, Teamcity, Azure.

My account application for ASOS.com to integrate into the existing .NET platform.

Highlights include:

- cross functional team working on meeting high levels of accessibility across the site
- successful delivery of a project despite tight delivery deadline
- multi-language support
- working with multiple ASOS API teams using Pact tests to allow building of UI based on defined API contracts
- online returns functionality

Red Badger - Badger Academy, July 2015 - August 2015.

- Ruby, Rails, Thin, PostgreSQL, Rubocop, Rspec, Node, JavaScript, React, Webpack, Babel, ESLint, Sass, Mocha, Chai, CircleCI, Heroku.

6 week project teaching interns how to develop a product in a modern technology company. Topics taught included, agile/kanban methodologies and processes, test-driven development, mobile first design, accessibility requirements and browser support.

Fortnum & Mason - Ecommerce, December 2014 - June 2015, August 2016 - March 2017, July 2018 - October 2018.

- Ruby, Rails, React, Redux, JavaScript, LiveScript, Flow, ES6, Redis, PostgreSQL, Spree Commerce, Elasticsearch, AWS, CircleCI, Buildkite, Terraform.

Ecommerce platform for [Fortnum & Mason](#). New build of Fortnum & Mason's online shopping experience which provided year on year online sales increases. Direct integration into Fortnum's Microsoft Dynamics AX and later conversion to D365 CRM systems.

Highlights include:

- full site new build, rebranding, and redesign
- a custom content management system (CMS) including versioning and live preview
- Microsoft AX/D365 integration and crossover
- Elasticsearch based product search and listing
- build your own hamper feature
- GDPR right to erasure

Additional client projects included Santander (Open Banking, International Payments), Fidelity (Institutional, Outlook), CarTrawler, Fortnum & Mason (Jermyn Street, Food Awards), and BSkyB across web and mobile.

Education

Durham University, 2009 - 2013.

MEng Mechanical (Aeronautic) Engineering - 2nd Class (Division 1) Honours

- Gained an understanding of basic programming while learning C++ and Matlab.
- Worked on group projects, researching current technologies and designing a product as a solution to engineering problems, such as a hybrid, electric, cargo vehicle for the developing world, and an electric passenger aircraft.
- Studied project management, product design and manufacture amongst more technical, engineering based subjects.

Makers Academy, February 2014 - May 2014.

- A highly selective, 12 week, full-time course.
- Ruby, test-driven, object-oriented, software development and design.
- Full stack web development.
- Pair programming and team projects.
